

Potential Energy Diagrams Worksheet Answers

As recognized, adventure as with ease as experience roughly lesson, amusement, as capably as treaty can be gotten by just checking out a ebook **potential energy diagrams worksheet answers** plus it is not directly done, you could receive even more roughly this life, on the subject of the world.

We have enough money you this proper as with ease as easy quirk to get those all. We have the funds for potential energy diagrams worksheet answers and numerous books collections from fictions to scientific research in any way. among them is this potential energy diagrams worksheet answers that can be your partner.

Potential Energy Diagram Worksheet ANSWERS 1. Which of the letters a-f in the diagram represents the potential energy of the products? e 2. Which letter indicates the potential energy of the activated complex? c 3. Which letter indicates the potential energy of the reactants? a 4. Which letter indicates the activation

Potential Energy Diagram Worksheet ANSWERS

The potential energy diagram below represents a chemical reaction: Which arrow represents the activation energy of the forward reaction? (1) A (2) B (3) C (4) D Base your answers to questions 7 through 9 on the information and potential energy diagram below. Chemical cold packs are often used to reduce swelling after an athletic injury.

What is the activation cnerv for the forward reaction? 3. What is the activation for the reverse reaction?

Worksheet 1-2 Potential Energy Diagrams key

1. Answer the following questions based on the potential energy diagram shown here: Does the graph represent an endothermic or exothermic reaction? Label the position of the reactants, products, and activated complex. Determine the heat of reaction, ΔH , (enthalpy change) for this reaction. Determine the activation energy, E_a for this reaction. How much energy is released or absorbed during the reaction?

Well, I was assuming that this ground was the H equals zero line. And we know that the gravitational potential energy is mgh. And where H equals zero, the potential energy is zero. So when this mass gets down to the final point, which I'm representing in this diagram, it no longer has any potential energy since the H would be zero.
